

VALUE OF EDUCATION AND VALUE OF SKILLS

NAME : P.MEGHANA

ROLL NO : 228A1A4424

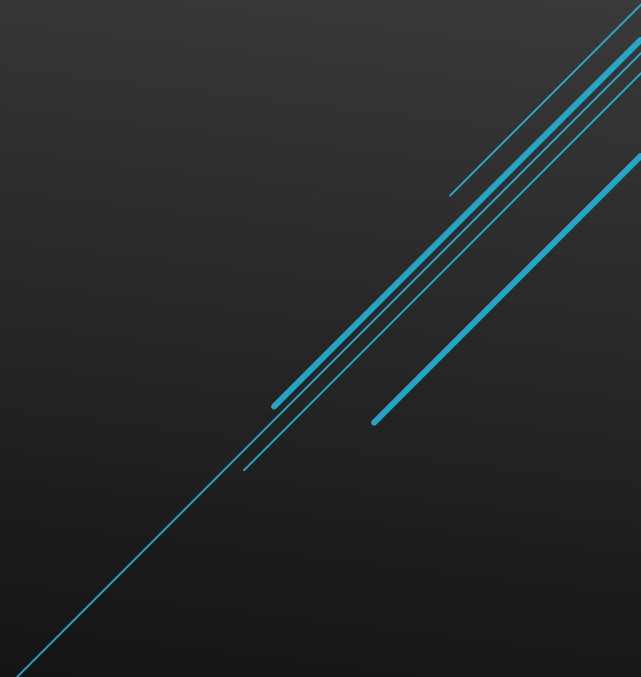

BRANCH : CSE-DS

VALUE OF EDUCATION

Education is one of the most valuable assets in human life. It is the foundation for personal development, social progress, and economic growth. Through education, individuals gain knowledge, skills, and values that guide them in making wise decisions and leading meaningful lives.

On a personal level, education builds confidence and improves communication, creativity, and problem-solving abilities. It opens doors to better career opportunities and financial security. An educated person can adapt to changes in society and use technology effectively to improve their quality of life.

Socially, education promotes equality, reduces poverty, and fosters peace. It teaches moral values, respect, and empathy, making individuals more responsible and compassionate. A society with educated citizens becomes stronger, more just, and progressive.

Three parallel teal lines of varying lengths and slopes are positioned on the right side of the slide, extending from the middle to the bottom right corner.

VALUE OF SKILLS

The syllabus for UHV-2 includes an objective: “**To help the students appreciate the essential complementarity between ‘VALUES’ and ‘SKILLS’ to ensure sustained happiness and prosperity which are the core aspirations of all human beings.**”

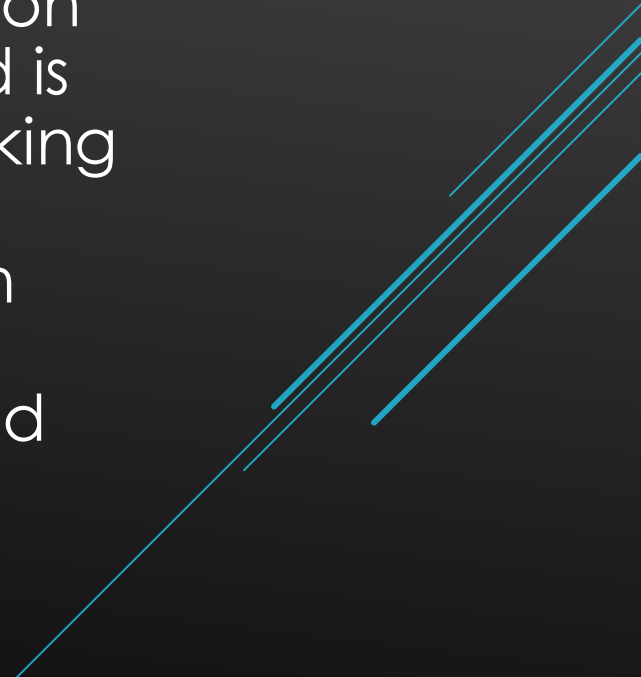

Skills are distinguished from values. Skills are about *how* we do things—the techniques, methods, and capabilities needed to act. Meanwhile values relate to *what* we choose to do—our goals, purposes, what we believe is important.

The course material states: **Value education** addresses questions of “What to do?”, helping in goal-setting, understanding basic aspirations. **Skill education** addresses “How to do?”, i.e. the ability to execute, to apply techniques.

There is emphasis that values and skills must go hand in hand: Value tells us what to do; skills are needed to carry out or realize those values in life

EXAMPLE :

In our daily life, the value of education and skills can be clearly seen in a simple situation like managing a household. Education gives us the understanding of planning, budgeting, and the importance of healthy living, while skills help us to actually cook food, manage expenses, and solve problems when they arise. For example, a person who is educated about nutrition knows what kind of food is good for health, but only when they have the skill of cooking can they prepare a healthy meal. In the same way, education teaches us the importance of communication and cooperation, but skills like speaking politely and managing time help us practice it effectively in family and workplace.

Three parallel teal lines of varying lengths are positioned diagonally in the bottom right corner of the slide, extending from the right edge towards the center.

Thank
you!
